

Y1 - Knowledge Organiser – Computer Science

Key Facts

- Technology uses science to solve problems.
- An algorithm is a set of instructions.
- A computer program is an algorithm.
- It is important to be precise in an algorithm.
- Algorithms are not just used on a computer.
- Event blocks tell the computer when things should happen.
- Object and command blocks are used together to instruct the computer what should happen.

Key Vocabulary

- Technology
- Algorithm
- Instructions
- Debug
- Action
- Blocks
- Object
- Command
- Sequence

A **start event** will trigger an action as soon as you run the program.

A **click event** will trigger an action when the object is clicked on.

Algorithm

Getting Changed

1. Follow these programming commands and match to the shape it makes.

Can you make the same shape using different commands?
